Summary

PORTFOLIO SCORE

Trendlyne scores your portfolio against benchmarks, considering factors such as profit, worth, volatility, and diversification.

Your Portfolio Score

37.6 /100

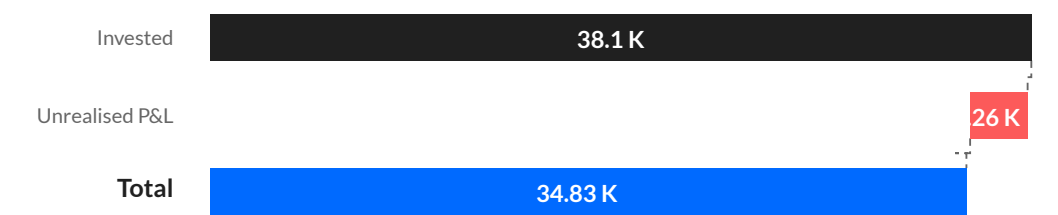

PERFORMANCE SUMMARY

Assessing your portfolio using quantitative measures such as unrealized profit, total worth, volatility, and stock diversification.

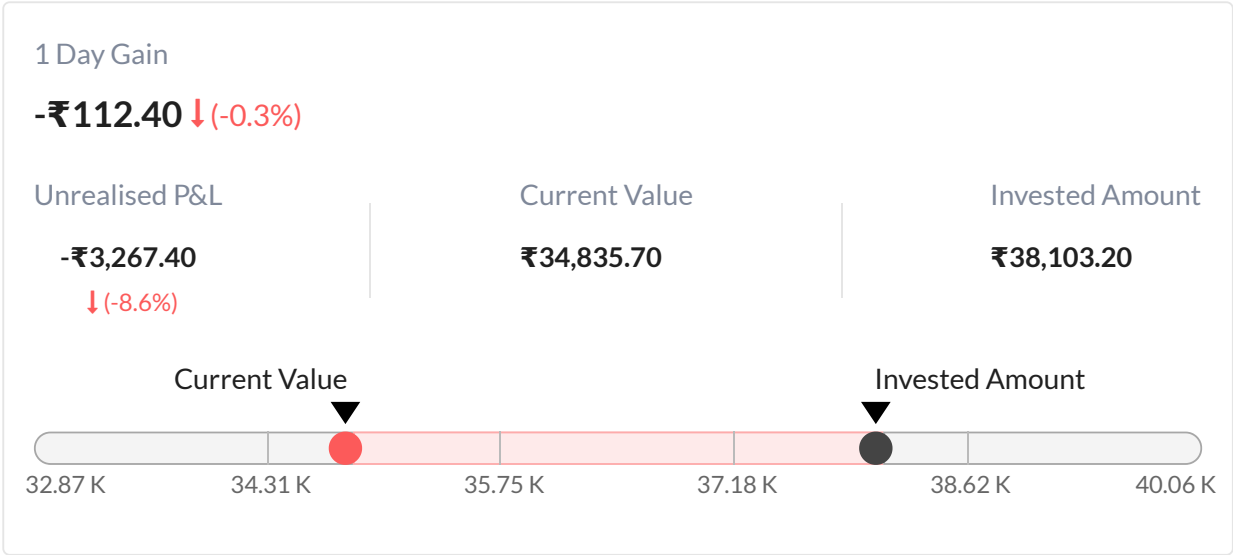

Increase in Invested Amount

-8.6%

Portfolio's unrealized loss: Rs -3.27 K, with a -8.6% ROI.

PORTFOLIO OVERVIEW

Stocks in motion

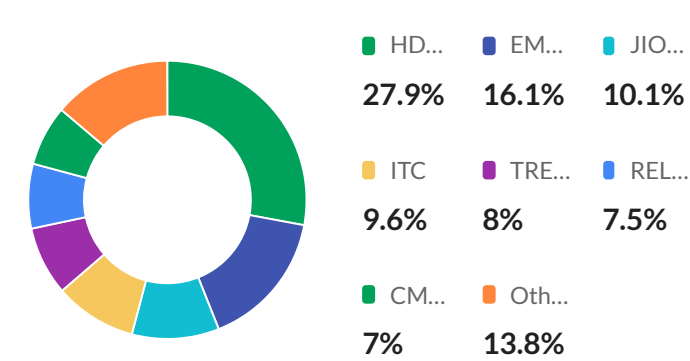

STOCK NAME	LTP & CHANGE %
ANANTRAJ	₹556.00 ↑8 (1.5%)
ITC	₹277.30 ↑0.3 (0.1%)
RELIANCE	₹1,306.40 ↓-6.8 (-0.5%)
TRENT	₹2,791.40 ↓-47 (-1.7%)

Your portfolio is down 0.3% today, while Nifty 50 is down -0.3%

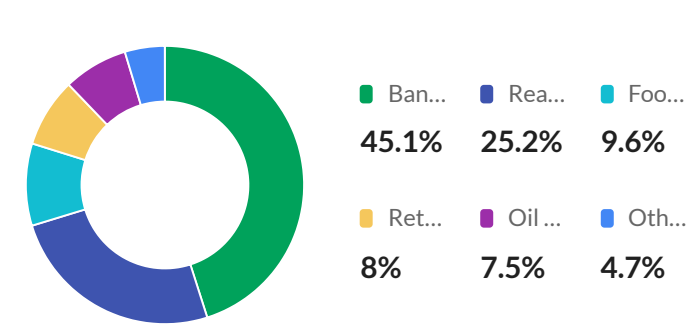

DIVERSIFICATION SUMMARY

This section illustrates how your portfolio is diversified across stocks, sectors, and market capitalization.

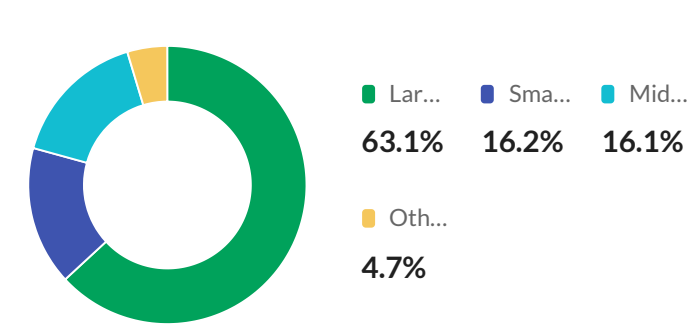

Stocks

Sector

Market Cap

Cap each stock at 10% in your portfolio.

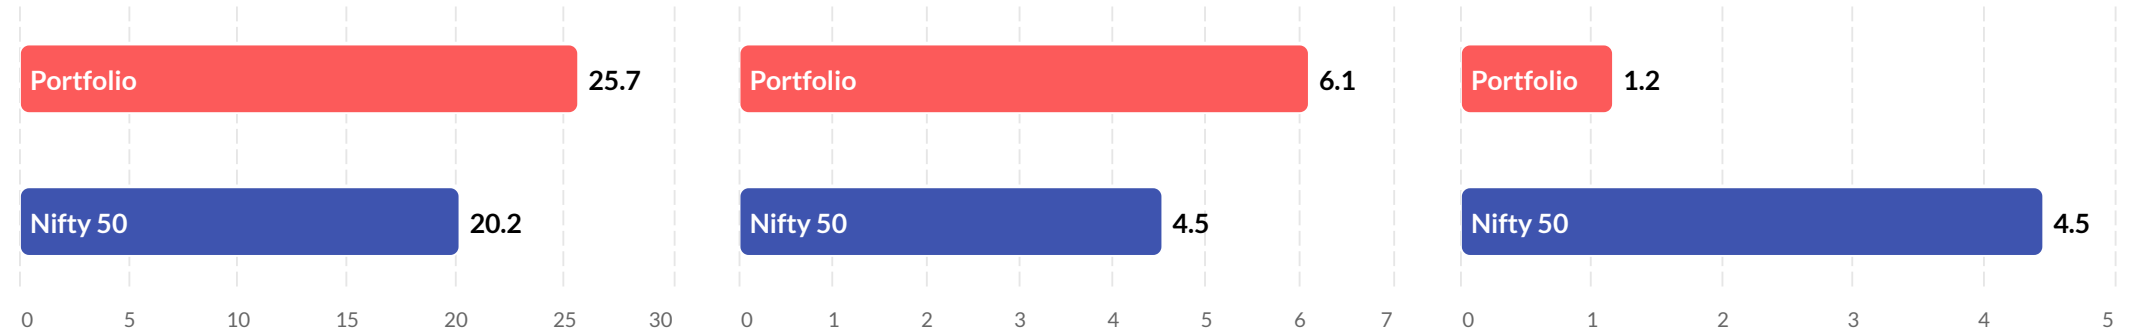

Your portfolio is well diversified across sectors.

Your portfolio is well diversified across market cap.

BENCHMARKING SUMMARY —

Compare your portfolio to the benchmark Nifty 50 for insights into performance, valuation, and growth.

PEProfit GrowthPEG

Your portfolio stocks show a relative overvaluation compared to the benchmark, suggesting anticipated higher earnings growth.

✖ Your Portfolio price to earnings is 25.66 vs Nifty 50 price to earnings of 20.20.

Your portfolio's profits grow faster than Nifty 50.

✔ Your portfolio profit growth is 6.1% vs Nifty 50 profit growth of 4.5%.

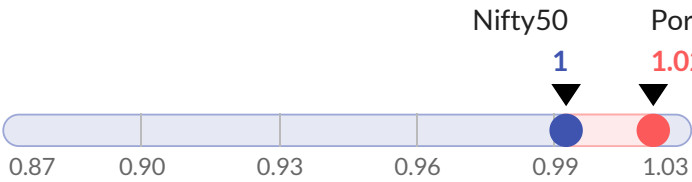

Portfolio's PEG ratio is lower than Nifty 50, suggests undervaluation.

✔ Your portfolio PE to growth is 1.16 vs Nifty 50 PE to growth of 4.46.

RISK ANALYSIS SUMMARY —

Risk and volatility check for your portfolio stocks.

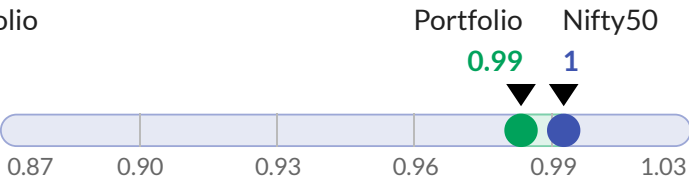

1 Month

Portfolio Beta is higher than 1 implies higher volatility than Nifty 50 index.

✖ Your Portfolio's Beta is 1.02 vs Nifty 50's Beta of 1.

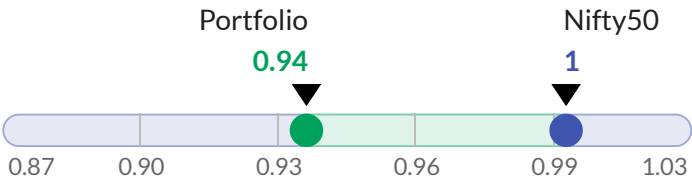

3 Months

Portfolio Beta is lower than 1 implies less volatility than Nifty 50 index.

✔ Your Portfolio's Beta is 0.99 vs Nifty 50's Beta of 1.

1 Year

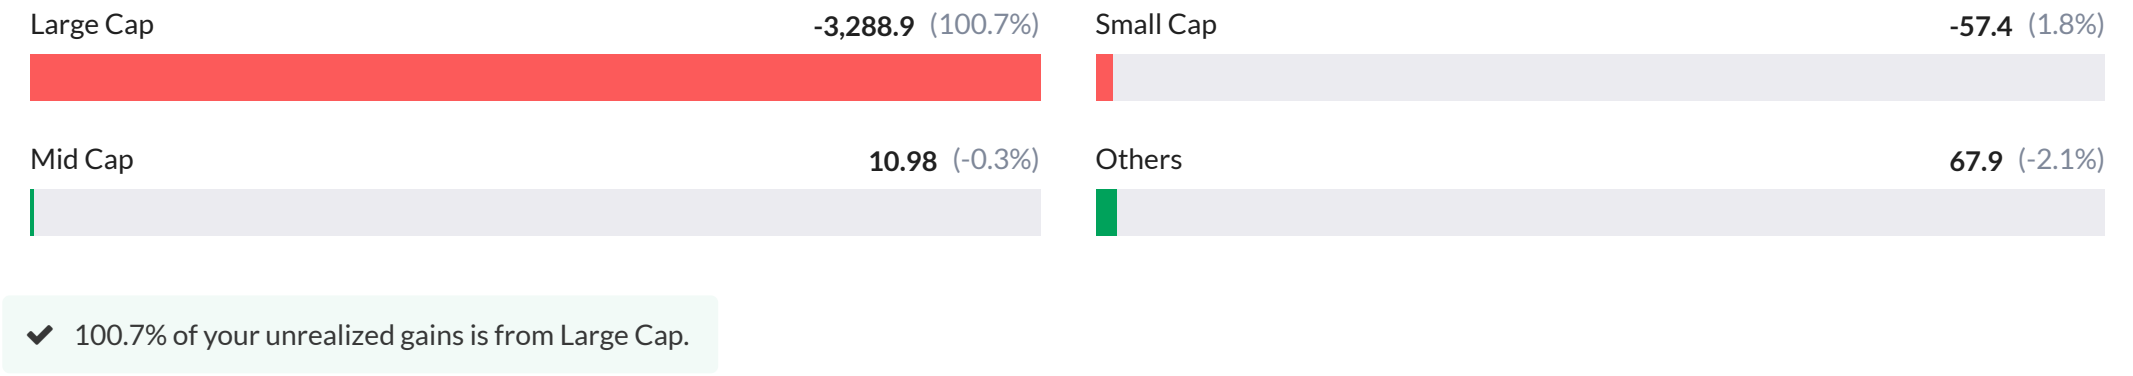

Portfolio Beta is lower than 1 implies less volatility than Nifty 50 index.

✔ Your Portfolio's Beta is 0.94 vs Nifty 50's Beta of 1.

Performance

PROFIT & LOSS BY MARKET CAP —

Portfolio heatmap displays gains and losses by market capitalization (large, mid, small), identifying the performing market cap type and the proportion of unrealized gains or losses for each.

STOCK WISE PERFORMANCE P&L BY RS —

Diversification

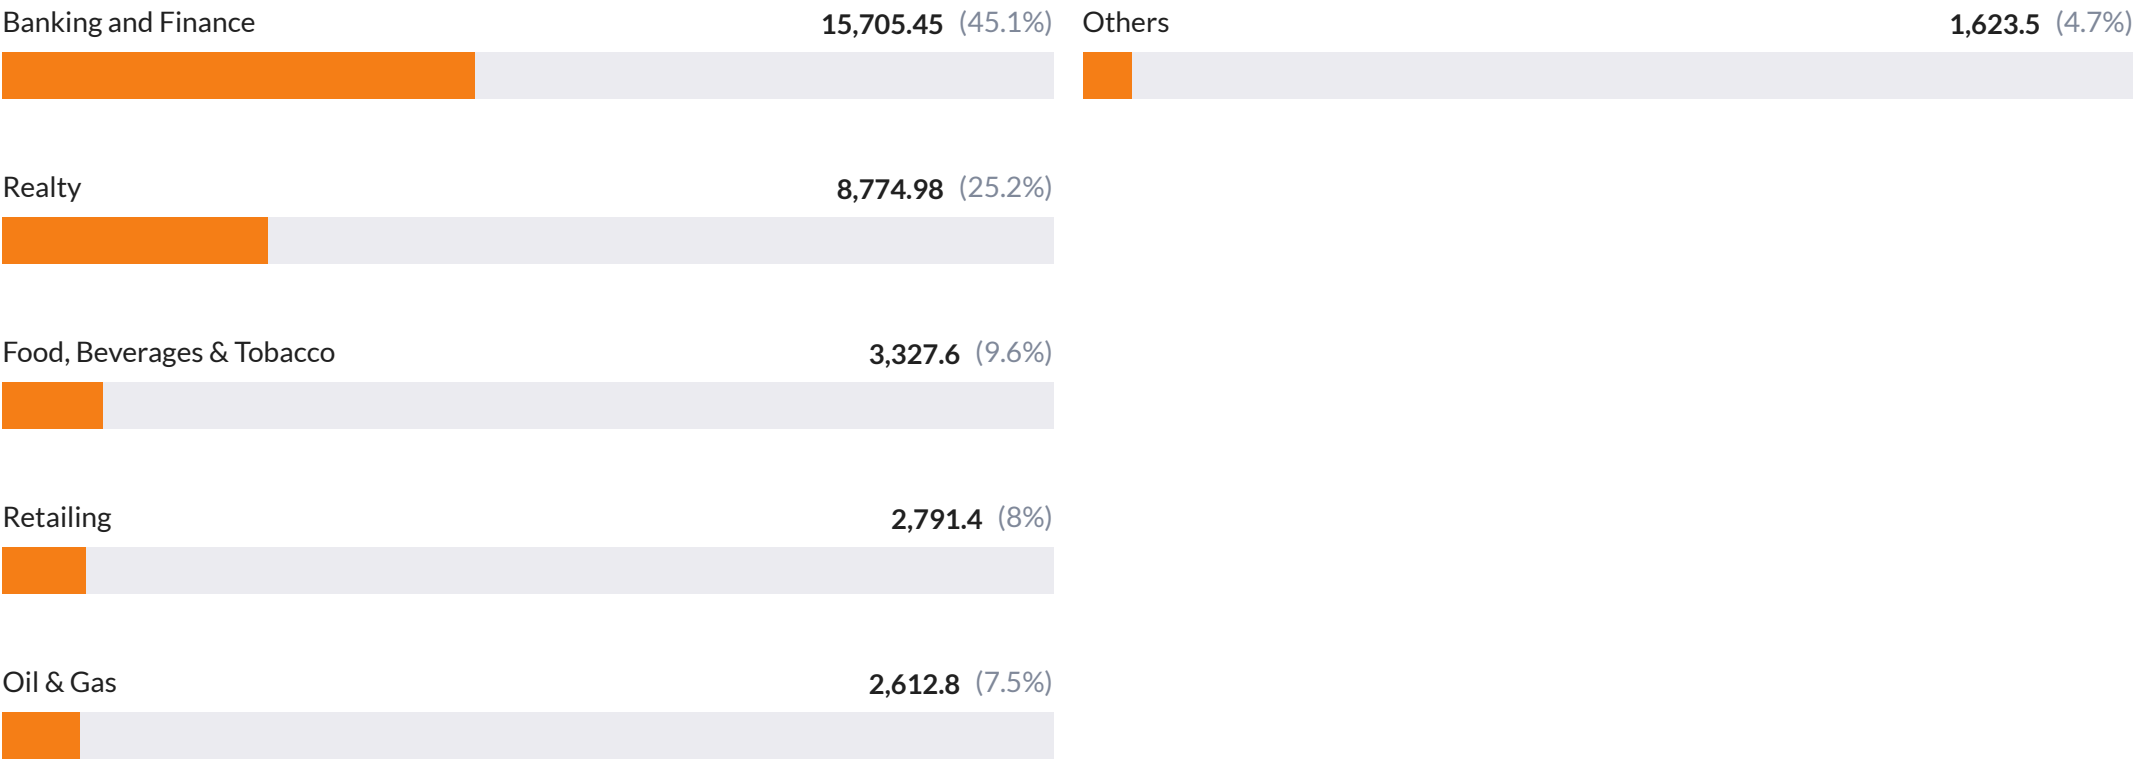

STOCK DISTRIBUTION —

Overall stock distribution in your portfolio and their performance

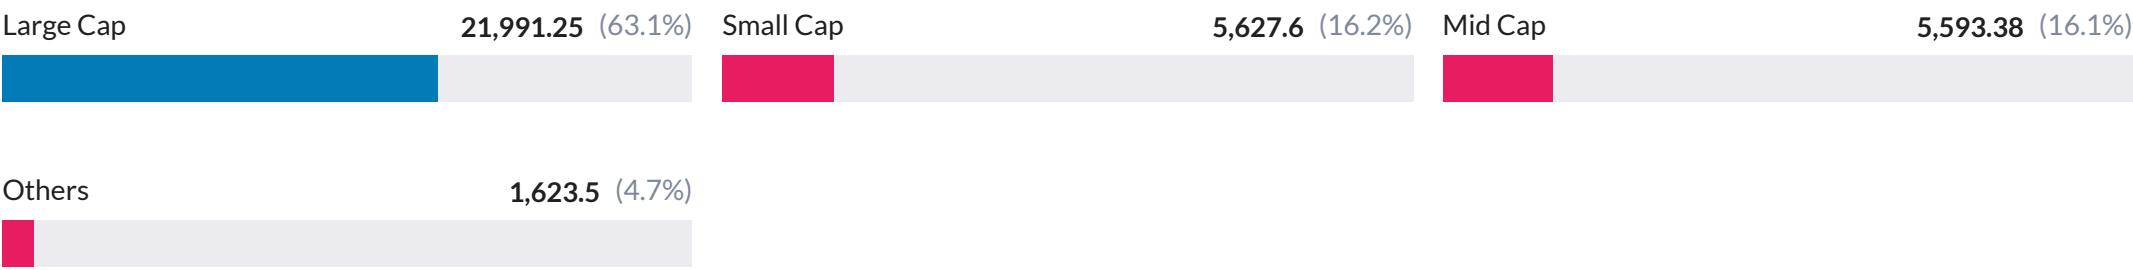

SECTOR DISTRIBUTION —

Portfolio distribution check across various sectors. An ideal portfolio invests in stocks from different sectors to reduce market risk and volatility.

MARKET CAP DISTRIBUTION —

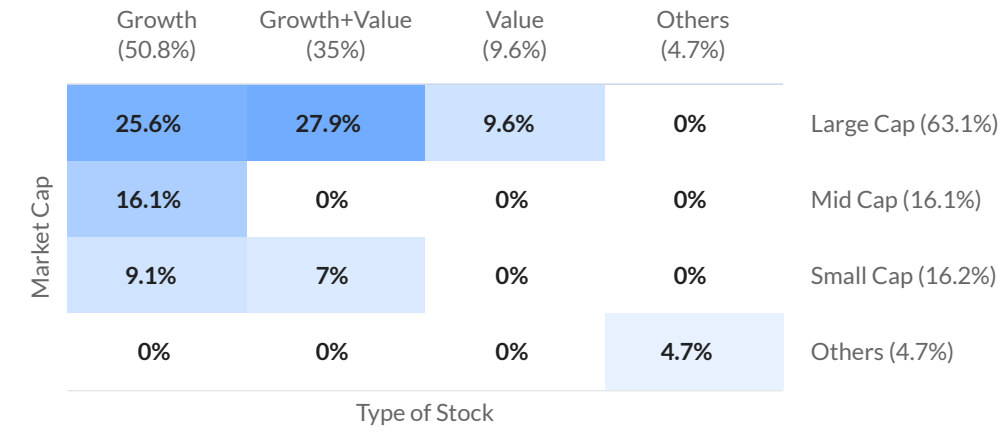

Portfolio distribution check across different market capitalizations (large, mid and small).

✔ Your portfolio is well diversified across market cap.

INVESTMENT STYLE —

Your investment style by analysing all the diversification and your preference

Your dominant investment type

Large Cap - Growth

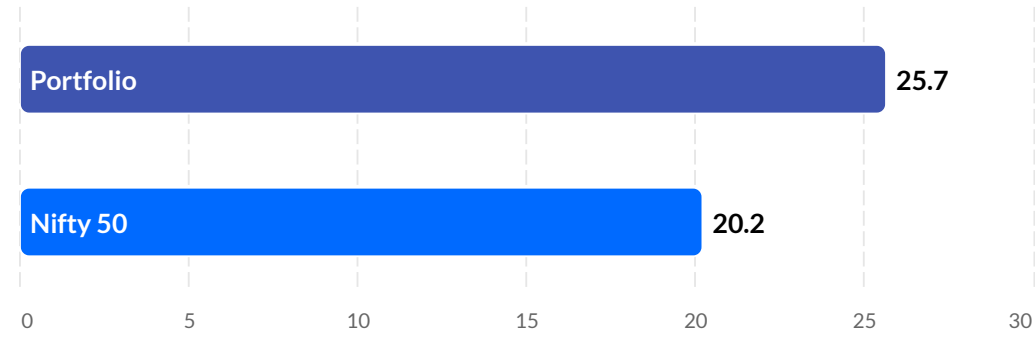

💡 Specify your preference for growth, value, or a mix. Growth stocks show high revenue/profit growth, while value stocks have a P/E under 20 or a PEG between 0 and 1.

Benchmarking

VALUATION METRICS —

Price-to-earnings (P/E) and price to book (P/B) ratios to assess your portfolio’s valuation. Valuation metrics are compared against the benchmark Nifty 50 index.

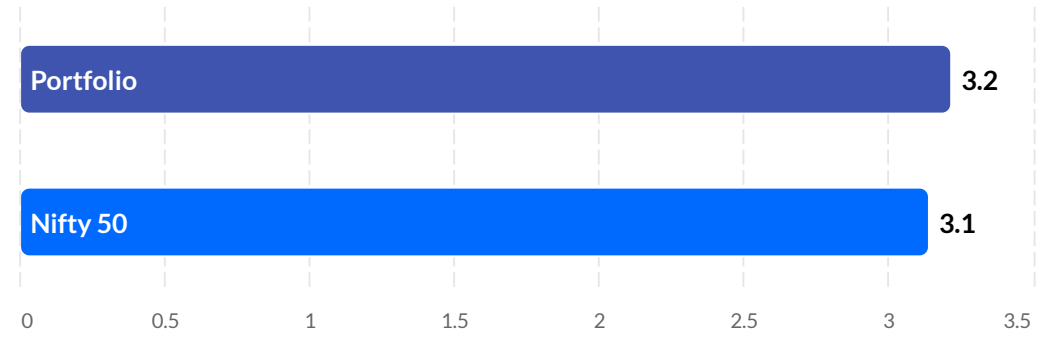

PE

💡 Your portfolio stocks show a relative overvaluation compared to the benchmark, suggesting anticipated higher earnings growth.

✖ Your Portfolio price to earnings is 25.66 vs Nifty 50 price to earnings of 20.20.

PB

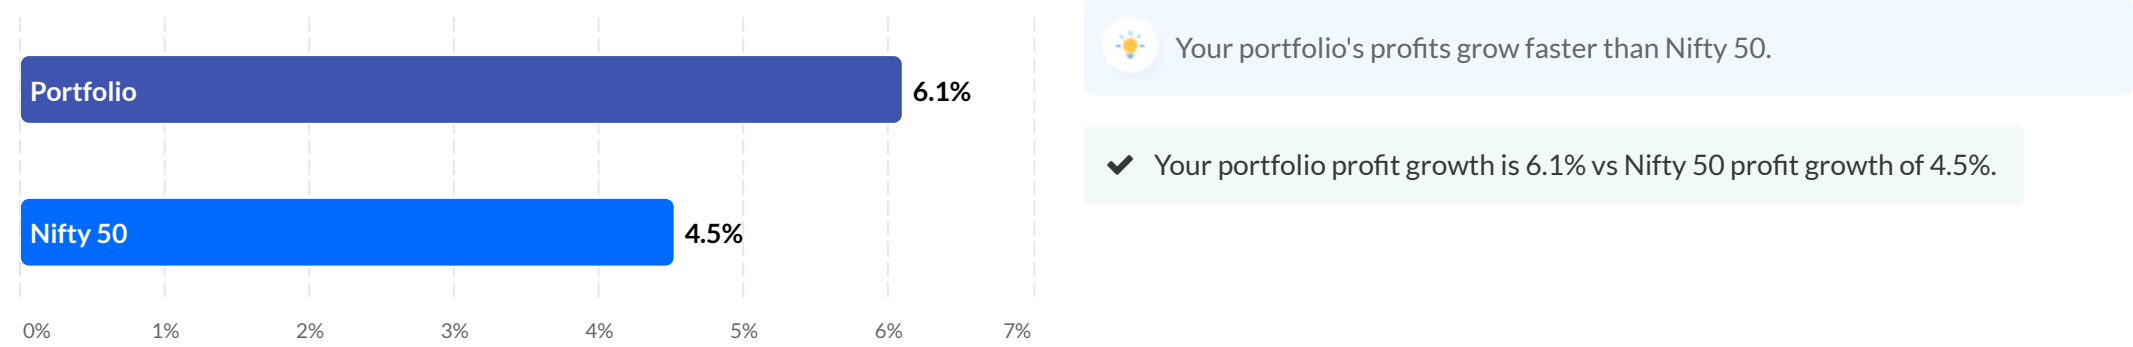

💡 Your portfolio stocks are relatively overvalued compared to the benchmark.

✖ Your Portfolio price to book is 3.22 vs Nifty 50 price to earnings of 3.14.

GROWTH METRICS —

Weighted average profit and revenue growth of your portfolio stocks compared to those of the Nifty 50. Check if your portfolio is outperforming or underperforming the benchmark in financial metrics.

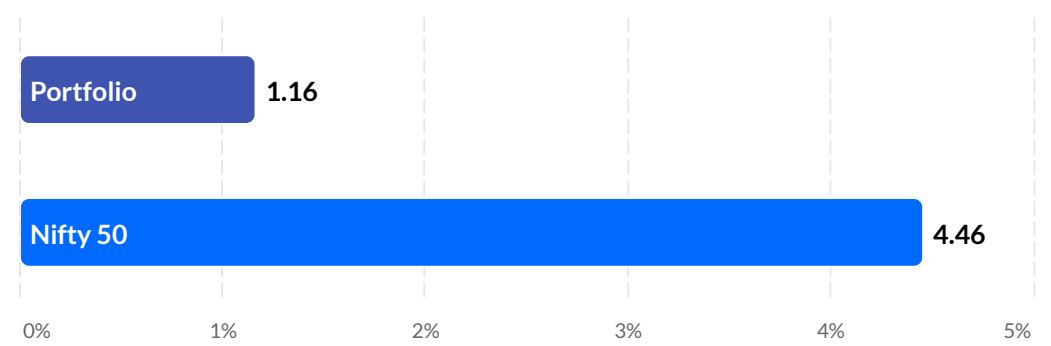

Profit Growth %

OTHER FINANCIAL RATIOS —

The price/earnings-to-growth (PEG) ratio is a stock's price-to-earnings (P/E) ratio divided by its expected earnings growth rate. PEG ratio below 1 is considered undervalued. Dividend yield is a stock's annual dividend payments to shareholders expressed as a percentage of its current price.

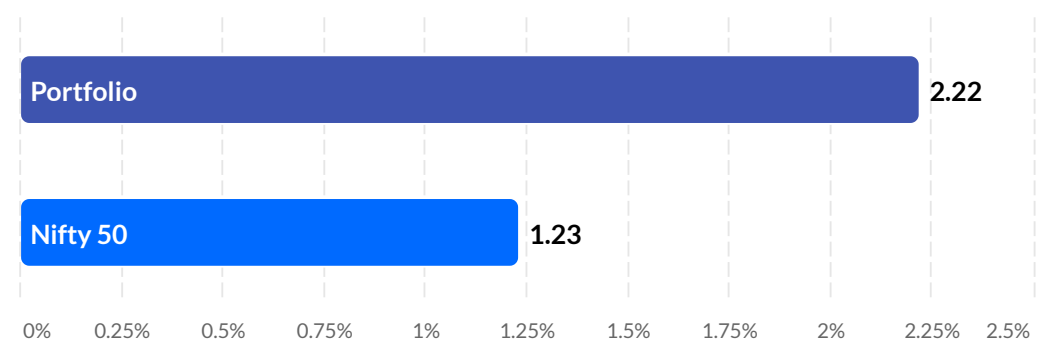

PEG

💡 Portfolio's PEG ratio is lower than Nifty 50, suggests undervaluation.

✔ Your portfolio PE to growth is 1.16 vs Nifty 50 PE to growth of 4.46.

Dividend Yield %

💡 Your portfolio's dividend yield is higher than Nifty 50.

✔ Your portfolio dividend yield is 2.2% vs Nifty 50 dividend yield of 1.2%.

Risk Analysis

LIQUIDITY CHECK —

The percentage of your portfolio categorised as illiquid. Shows challenges in selling these stocks due to low trading volumes on the exchanges, leading to losses.

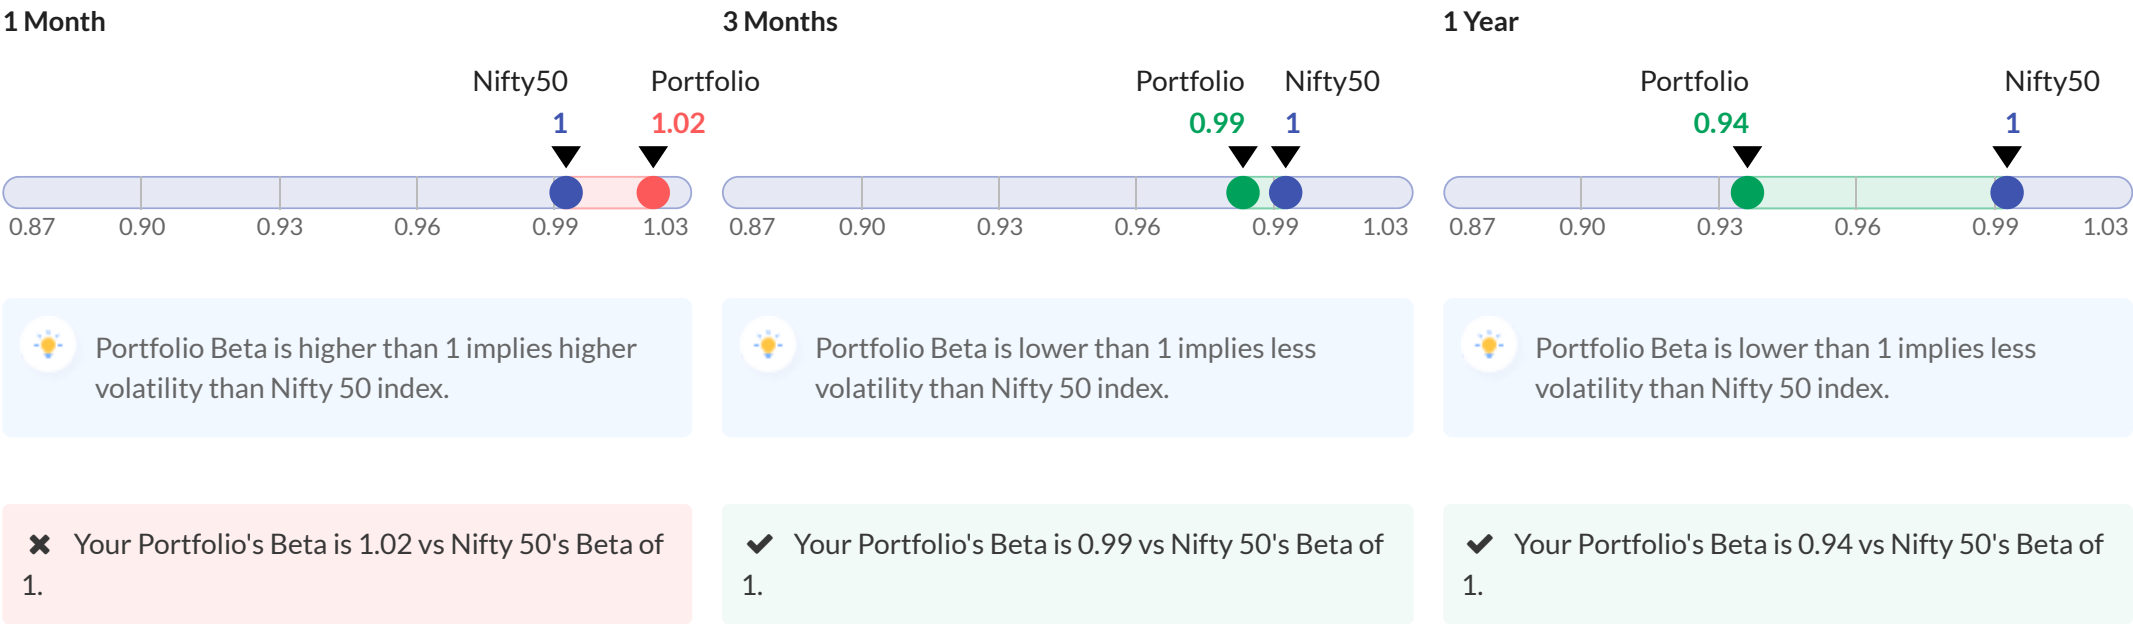

% of illiquid stocks in your portfolio

0%

STOCK	SHARES OWNED	MARKET VALUE
No records		
💡 This means that 0.0% of your portfolio is illiquid due to low trading volume on the exchanges. You may not be able to easily sell these stocks because of lack of demand.		

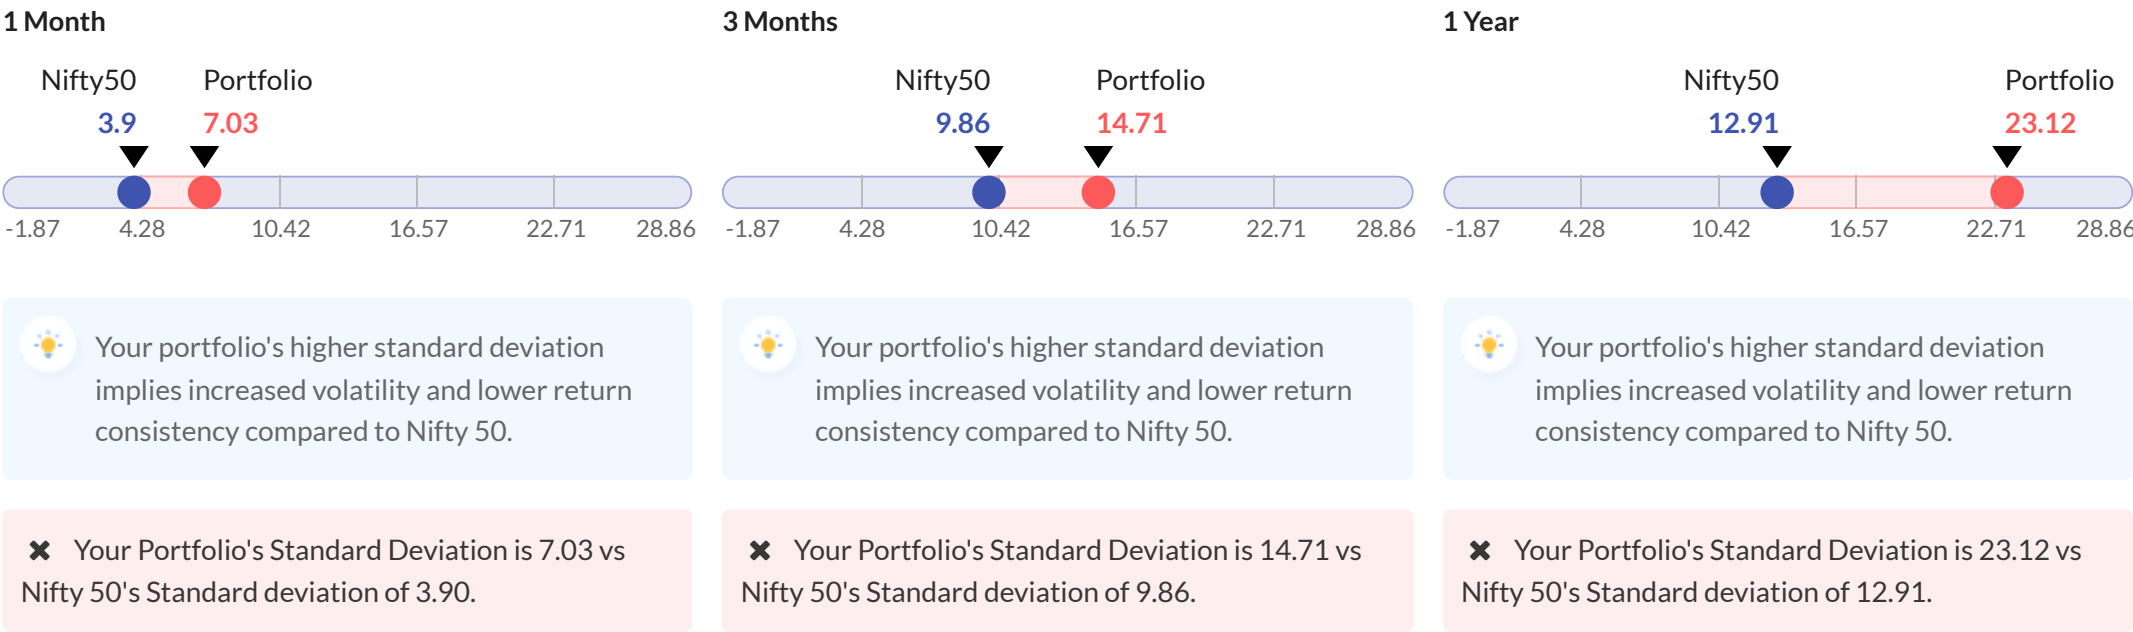

BETA —

Beta (β) measures volatility or systematic risk of your portfolio against the Nifty 50. A portfolio with beta higher than 1 is more volatile than the Nifty 50. A portfolio can have a lower beta and still have higher total risk due to firm-specific risks. Total risk consists of systematic and firm-specific risks.

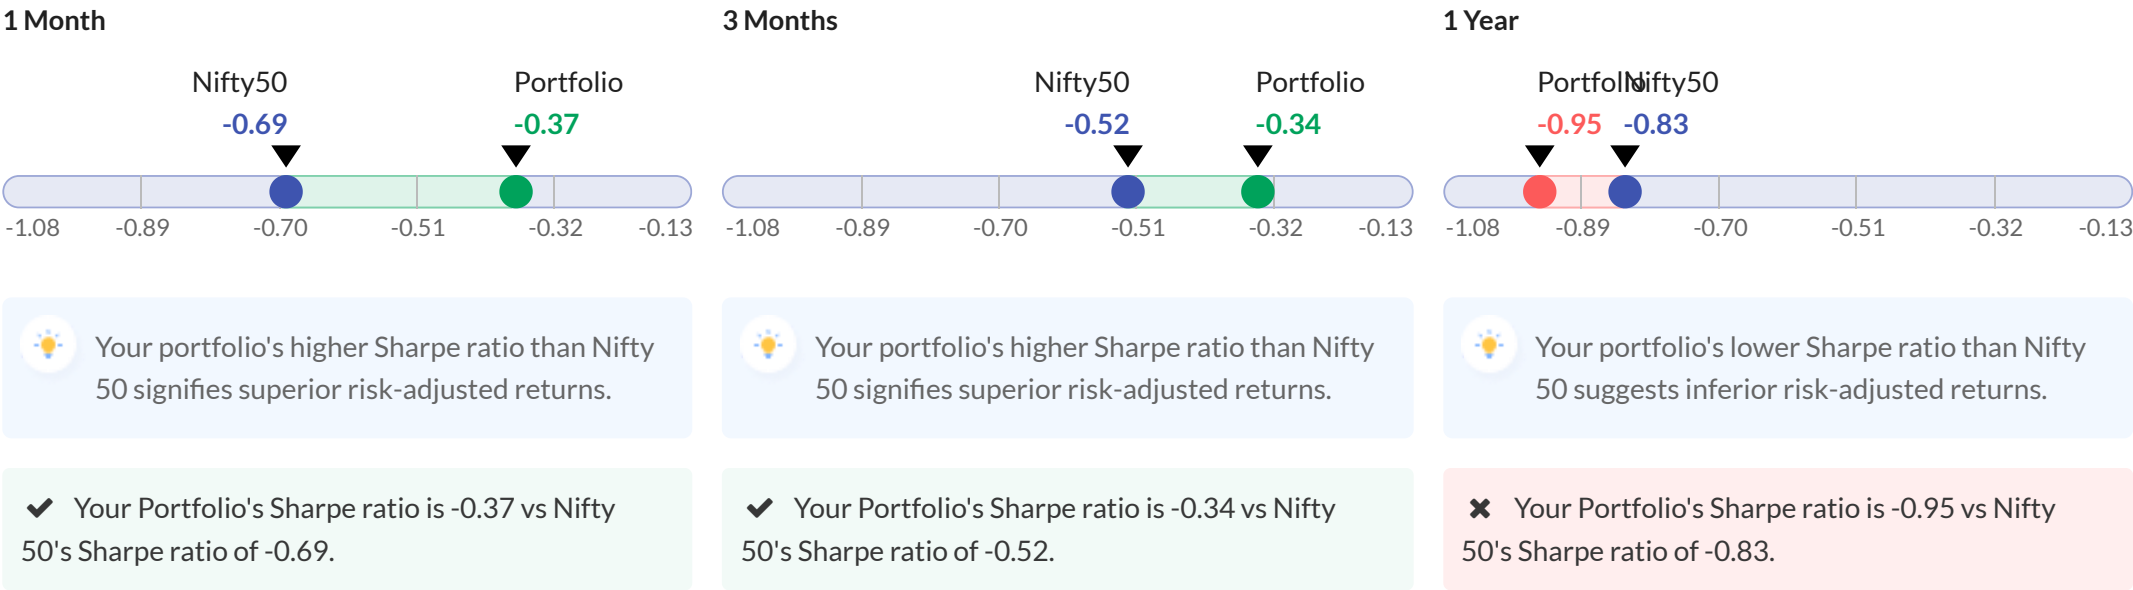

STANDARD DEVIATION —

Standard deviation of a portfolio measures how much investment returns differ from the average probability distribution. A bigger standard deviation means more risk, with volatile returns. A smaller standard deviation means less risk, with steady returns.

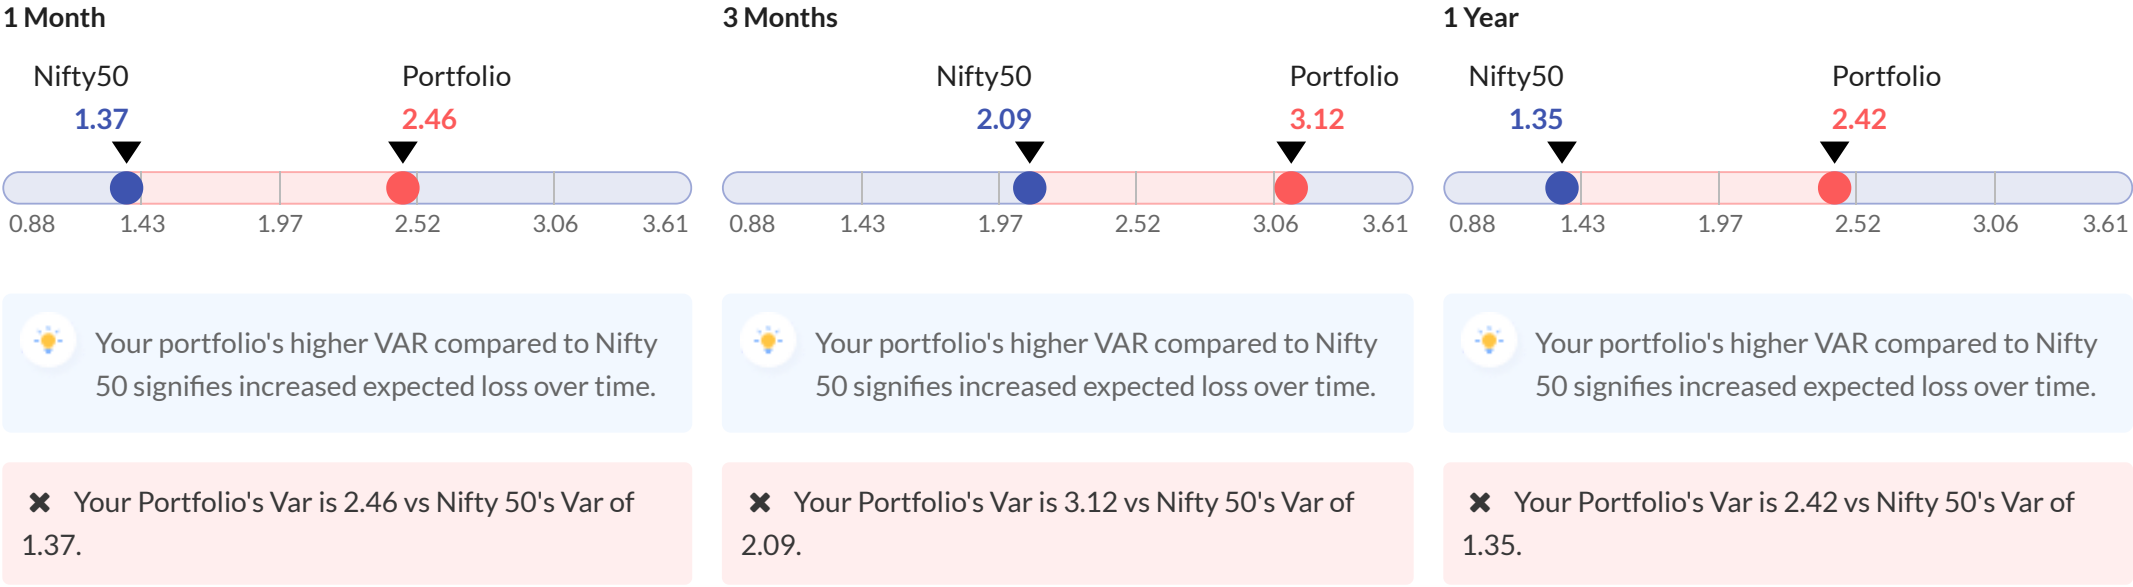

SHARPE RATIO —

The Sharpe ratio measures risk-adjusted returns. It checks if the excess return gained is in line with the extra risk you took. A bigger Sharpe ratio means your investment did well. If the ratio is higher than 1, it's good. If it's more than 2, it's very good. And if it's 3 or more, it's excellent.

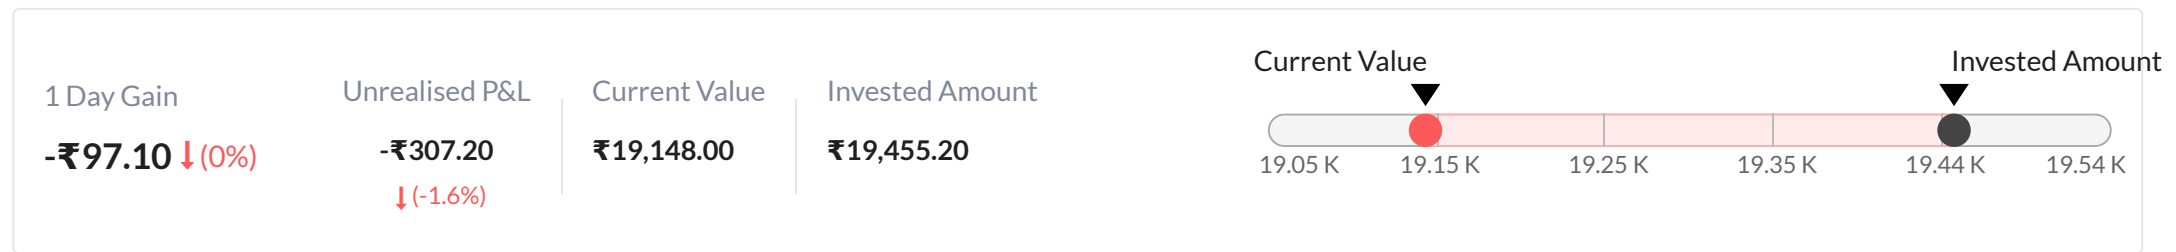

VALUE AT RISK (VAR) —

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

Mutual Fund

PORTFOLIO OVERVIEW —

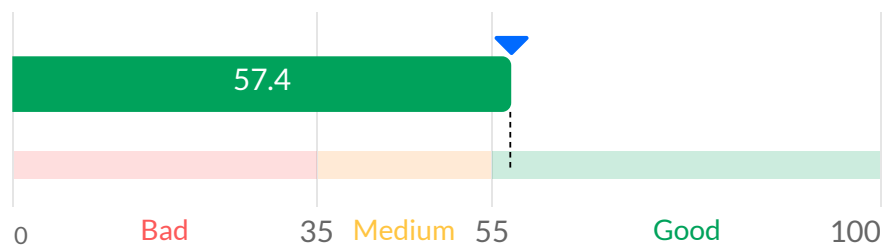

Your portfolio is down -0.0% today, while Nifty 50 is down -0.3%

A mutual fund portfolio score quantifies the performance and risk of securities within a portfolio. Trendlyne assesses overall performance and risk, comparing it to benchmarks or other portfolios.

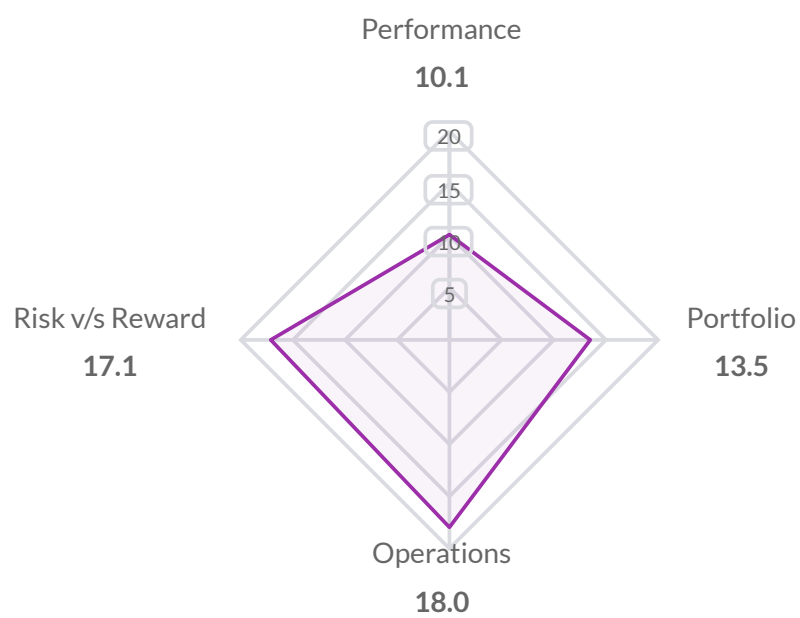

57.4 /100

5 ★

Considers only MFs which have morning star ratings.

✔ Portfolio score: 57.36 (Good category) based on the weighted average of Trendlyne checklist scores.

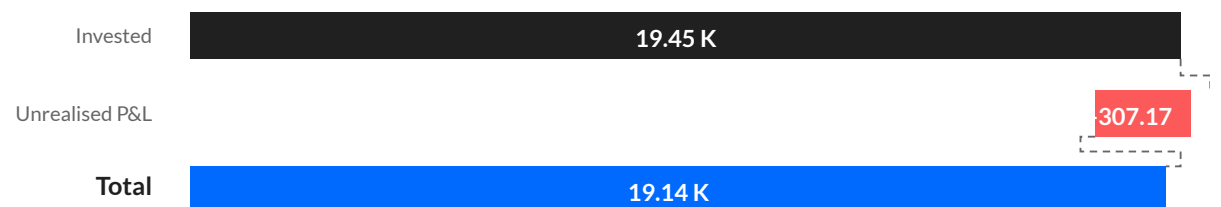

A mutual fund checklist score quantifies portfolio performance and risk. Trendlyne compares it to benchmarks or other portfolios.

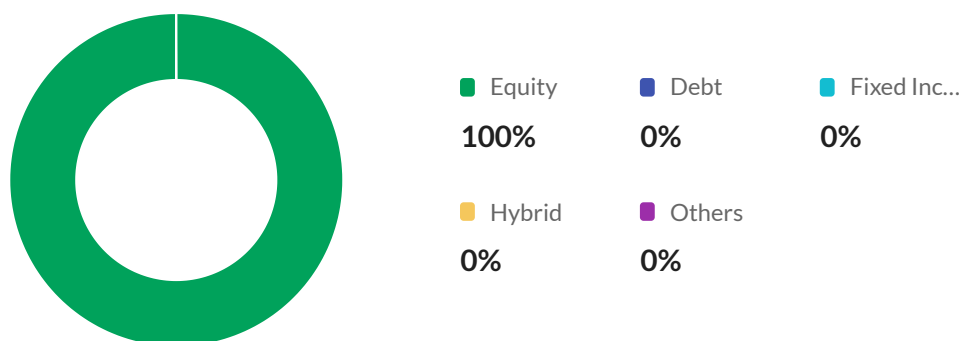

Evaluation of your portfolio based on various quantitative measures like unrealised profit, overall worth, volatility and stock diversification.

--1.6%

Your portfolio is showing a good increase in the total worth.

Diversify by investing in stocks across various sectors, industries, and locations instead of concentrating funds in a single or limited number of mutual funds.

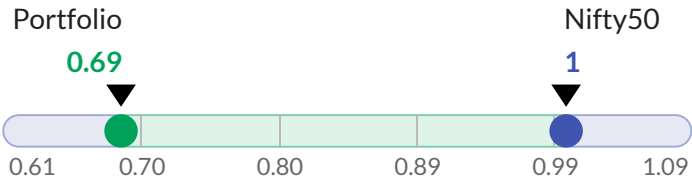

A single mutual fund category should not constitute more than 60% of your portfolio, to minimize risk

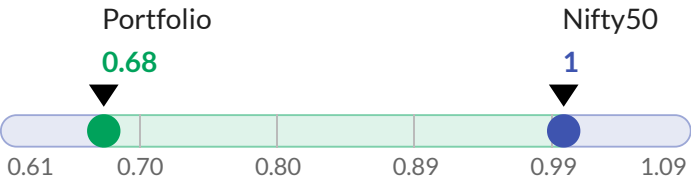

KEY RISK AND RETURN RATIOS —

Risk analysis assesses potential downsides in a mutual fund by evaluating factors that could harm its performance and gauging the likelihood and impact of these risks.

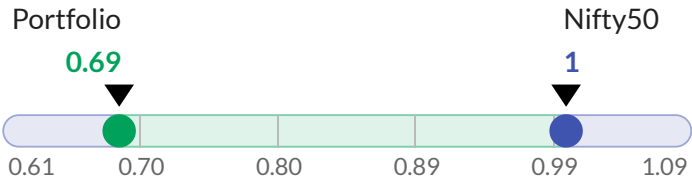

1 Year

3 Years

5 Years

✓ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

✓ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

✓ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

Performance

FUND WISE RETURN ANALYSIS —

Fund return analysis refers to the evaluation of the financial performance of a mutual fund based on changes in its price . This analysis helps investors understand the potential return on their investments and make informed decisions about buying and selling mutual fund.

Diversification

ASSET DISTRIBUTION —

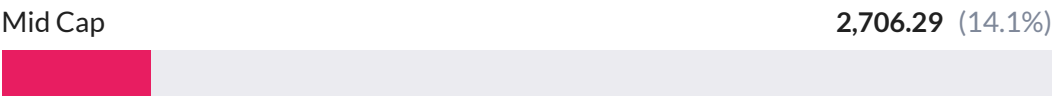

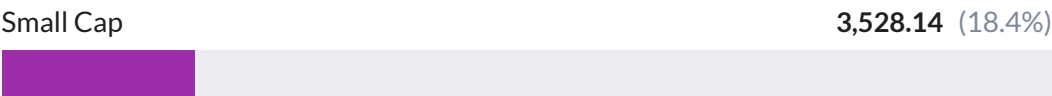

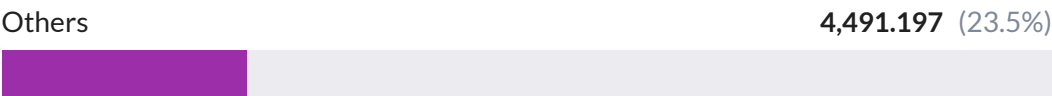

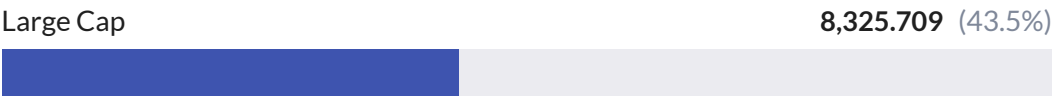

Overall asset distribution in your portfolio and their performance

A single mutual fund category should not constitute more than 60% of your portfolio, to minimize risk

MARKET CAP DISTRIBUTION FOR EQUITY MF —

Market capitalization is calculated by multiplying the number of outstanding shares of a stock by its current price.

Your portfolio is well diversified across different market capitalization stocks to minimize risk.

DEBT EXPOSURE —

Fund return analysis refers to the evaluation of the financial performance of a mutual fund based on changes in its price . This analysis helps investors understand the potential return on their investments and make informed decisions about buying and selling mutual fund.

Overall Credit Quality of Portfolio

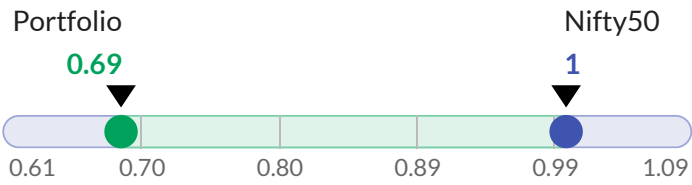

STOCK	MATURITY (MONTHS)	CREDIT QUALITY
✔ Try to minimise investment in low ('BB', 'B','CCC' and 'C') credit quality debt funds .		

Risk Ratios

BETA —

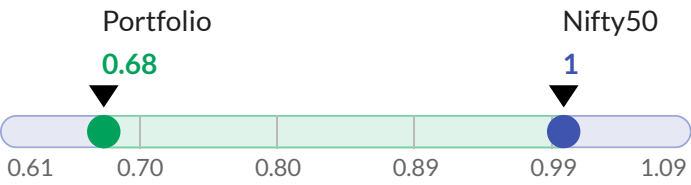

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

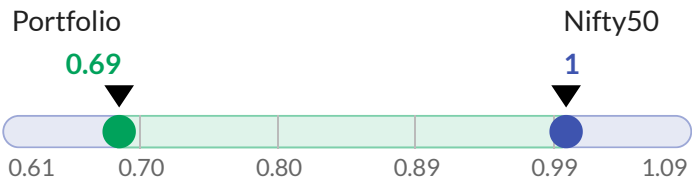

✔ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

3 Years

✔ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

5 Years

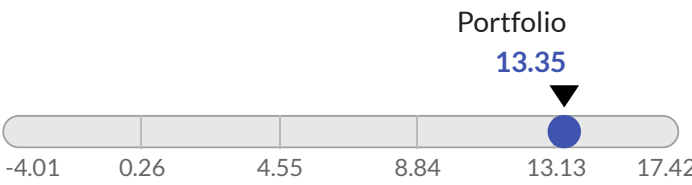

✔ Portfolio Beta below 1 implies lower volatility compared to the Nifty 50 benchmark.

STANDARD DEVIATION —

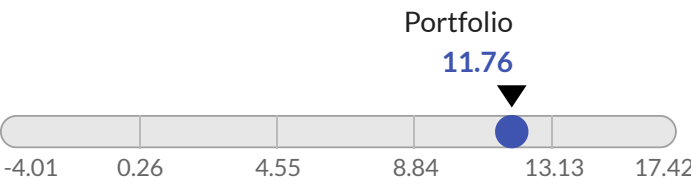

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

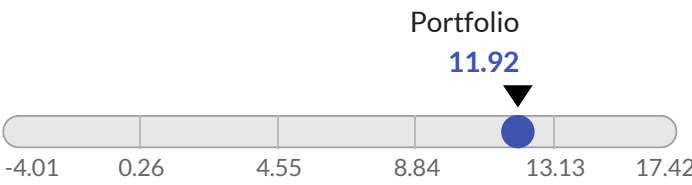

✘ Portfolio's standard deviation: 13.36. A high deviation implies high volatility and low return consistency.

3 Years

✘ Portfolio's standard deviation: 11.76. A high deviation implies high volatility and low return consistency.

5 Years

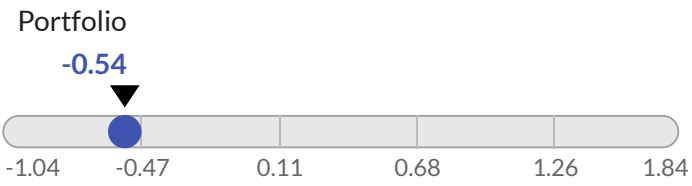

✘ Portfolio's standard deviation: 11.93. A high deviation implies high volatility and low return consistency.

SORTINO RATIO —

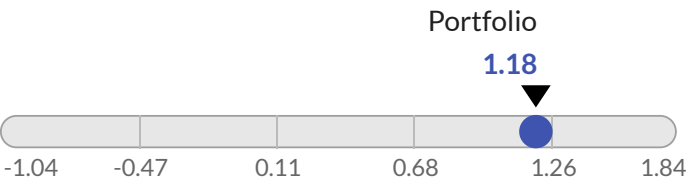

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

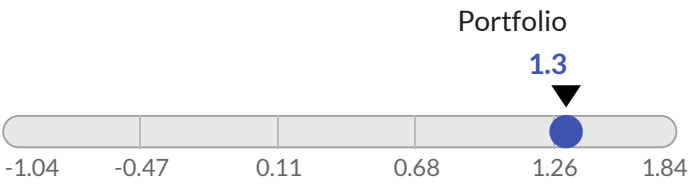

✘ Sortino ratio < 1: Inadequate for mutual fund portfolio, reflecting subpar return relative to downside risk.

3 Years

✔ Sortino ratio 1-2: Good for mutual fund portfolio, reflecting favorable return relative to downside risk.

5 Years

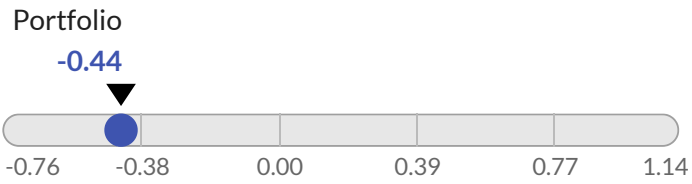

✔ Sortino ratio 1-2: Good for mutual fund portfolio, reflecting favorable return relative to downside risk.

Return Ratios

SHARPE RATIO —

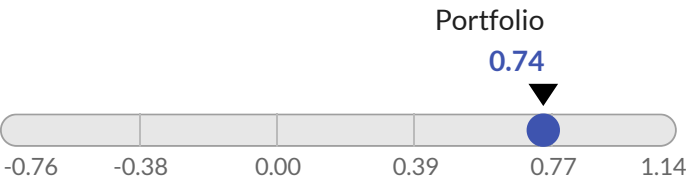

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

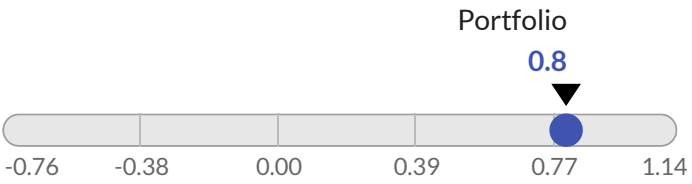

✘ Sharpe ratio below 1 signals suboptimal returns for a mutual fund portfolio.

3 Years

✘ Sharpe ratio below 1 signals suboptimal returns for a mutual fund portfolio.

5 Years

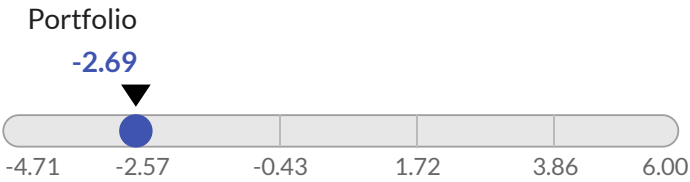

✘ Sharpe ratio below 1 signals suboptimal returns for a mutual fund portfolio.

JENSEN'S ALPHA —

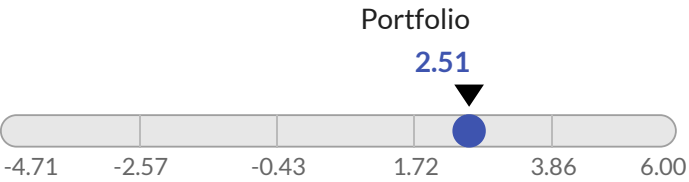

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

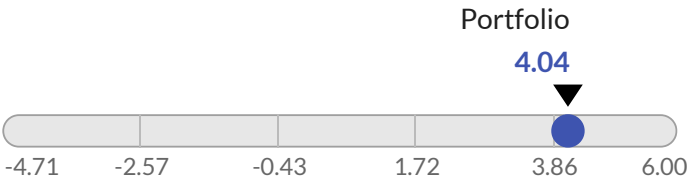

✖ Jensen's Alpha: -2.69. Your mutual fund portfolio lacks alpha (excess return) compared to the market.

3 Years

✔ Jensen's Alpha of your portfolio is 2.52. This means your mutual fund portfolio is generating alpha (excess return) vs the overall market.

5 Years

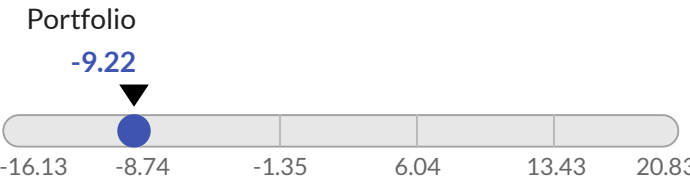

✔ Jensen's Alpha of your portfolio is 4.05. This means your mutual fund portfolio is generating alpha (excess return) vs the overall market.

TREYNOR'S RATIO —

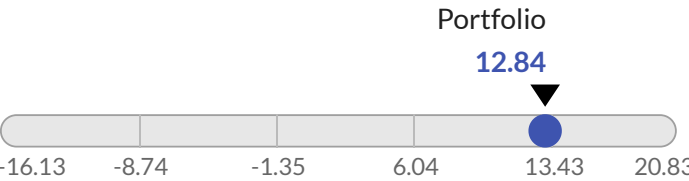

Valuation metrics are financial measures used to determine the value or worth of a stock, company, or asset.

1 Year

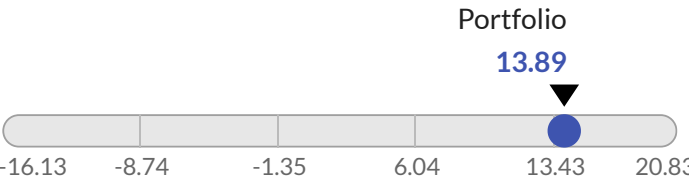

✖ Portfolio's Treynor's ratio: -9.21, indicating yields below the risk-free rate.

3 Years

✔ Portfolio's Treynor's ratio: 12.84, indicating a return of 12.84 units per unit of risk taken.

5 Years

✔ Portfolio's Treynor's ratio: 13.90, indicating a return of 13.90 units per unit of risk taken.
